

WHAT IS CLAIMED IS:

1. A medical article for skin attachment comprising:

a backing having a bottom surface,

a first adhesive layer disposed onto said bottom surface of said backing, said first adhesive layer having a first lower surface facing away from said bottom surface,

a first protective cover releasably attached to said first lower surface of said first adhesive layer, said first protective cover having a first cover lower surface facing away from said first lower surface,

a second adhesive layer disposed onto said first cover lower surface of said first protective cover, said second adhesive layer having a second lower surface facing away from said first cover lower surface, and

a second protective cover releasably attached to said second lower surface of said second adhesive layer.

2. The medical article as in claim 1, wherein said first adhesive layer comprises a first adhesive characterized by a first peel strength, said second adhesive layer comprises a second adhesive characterized by a second peel strength, said second peel strength being lower than said first peel strength.

3. The medical article as in claim 1, wherein said first protective cover comprising a material characterized by a peel strength between thereof and a first adhesive layer, said strength being higher than said second peel strength.

4. The medical article as in claim 1, wherein said first protective cover extends beyond said first adhesive layer to form at least one first tab to facilitate its removal.

5. The medical article as in claim 4, wherein said second protective cover extends beyond said second adhesive layer to form at least one second tab to facilitate its removal.

6. The medical article as in claim 5, wherein said second tab extends beyond said first tab.

7. The medical article as in claim 5, wherein said first and second tabs are color-coded.

8. A disposable article for attachment comprising:

a backing having a bottom surface,

a first adhesive layer disposed onto said bottom surface of said backing, said first adhesive layer having a first lower surface facing away from said bottom surface,

a first protective cover releasably attached to said first lower surface of said first adhesive layer, said first protective cover having a first cover lower surface facing away from said first lower surface,

a second adhesive layer disposed onto said first cover lower surface of said first protective cover, said second adhesive layer having a second lower surface facing away from said first cover lower surface, and

a second protective cover releasably attached to said second lower surface of said second adhesive layer.

9. The medical article as in claim 8, wherein said first adhesive layer comprises a first adhesive

characterized by a first peel strength, said second adhesive layer comprises a second adhesive characterized by a second peel strength, said second peel strength being lower than said first peel strength.
